Note:-

The NEXA NC-1200 is a mid to long distance scanner and should be held between 5cm - 20cm from the bar code to be scanned.

Holding the scanner in close contact with or immediately above the bar code **will not** give satisfactory results.

The command bar codes in the left hand column can be used to reset the NEXA NC-1200 scanner to default conditions. Note the commands required if the NEXA NC-1200 unit incorporates USB interfacing or KBD interfacing.

The command bar codes in the right hand column are used to set the NEXA NC-1200 unit for manual trigger operation or non-trigger (continuous) scan mode of operation. Selecting the continuous scan mode of operation will cause the scanners LED's to be illuminated continuously, this is the mode of operation recommended when using the NC-1200 on its "HANDS FREE" stand, a small sensitivity delay between reads is incorporated to prevent accidental multiple reads of the same barcode.

When set to non-trigger (continuous) mode the LED's can be switched **ON** or **OFF** with the trigger.
