

BAR CODE BLING

Available in 4 striking colours the D-Tech DB-1000 RF series are new generation wireless bar code scanners/readers that cater for most current and popular 1D & 2D bar code formats.

Dataman Barcode Systems

As illustrated the DB-1000's will read single dimension (1D) and dual dimension (2D) bar codes, this is the future of bar-coding. What this means is that the DB-1000 **can still be used with your existing bar codes** as well as bar code formats and applications that will emerge in the near and not so distant future.

The DB-1000's will also read bar codes that are on terminal screens and iPhone / iPad screens. A spin off performance bonus of the area imaging technology that is used in these new generation scanners is the omni-directional optics. In real terms this results in it being no longer necessary to hold the scanner in polar alignment with the bar code, the result is faster and more comfortable scanning.

Incorporating memory storage capability the DB-1000 can also be used for remote data collection beyond any wireless range restrictions.

Expressions of interest welcome.
